

## Newton SRL - Keeping Consumables Fresh

### Company

**NEWTON**

### Location

Naples, Italy

### Product

HRL12540WFR

### Installation Date

September 2023

### Application

UPS Backup

Providing materials for power in the food and beverage industry means keeping consumables fresh, secure, and ready to ship at a moment's notice. Losing power to produce packaging means delayed shipments and eventually leading to lost product on the grocery store shelf. Having quality backup power to keep the operation running smoothly, ready to discharge instantaneous, is paramount.

This end-user needed a quick, affordable, reliable battery solution to arrive within two (2) weeks to keep power equipment operating without delay. Our HRL series was the perfect fit for this application. HRL series, standing for high-rate long life, takes our HR and UPS series and expands upon its exceptional performance across various high-power backup power requirements. HRL series uses the latest wafer-thin plate technology combined with special proprietary formula utilizing 99.99% pure lead ingot in production for lead oxide, lead plate grids, and other lead components, all to provide optimum high-rate performance with a design life of up to 12 years in standby service.

The installation and distribution partner, Newton SRL, says they "are very proud to work with and offer products from CSB due to the high quality and reliability of the batteries." Newton goes on to say, "Combining our installation network with distribution locations throughout Italy, we can offer CSB batteries to all data center uses both big and small." Whether it provides power to keep perishables fresh or other data center UPS requirements, customers consistently select CSB for their backup needs across the world.
