

M SAN Grupa - Traffic Surveillance and Security

Company

M SAN Grupa d.o.o

Location

Zagreb, Croatia

Product

EVX12750

Installation Date

2017 - 2022

Application

Security UPS

Video surveillance and security provides real-time information as it happens for crime prevention, emergency responses, and traffic flow and management amongst many others. Having reliable backup power to keep these cameras running means responses to emergencies or crimes can happen quickly and traffic flow management can remain constant.

Our customer, M SAN Grupa, was called upon to deliver these reliable systems for an operator in Croatia and they wanted only the best energy storage options from CSB. Using our EVX12750 battery, which is designed for rugged deep cycle applications, means the power to the surveillance stays on, even with utility power going offline. The EVX series is a VRLA-AGM design battery utilizing pure-lead construction to provide up to 1800 cycles at 30% DoD. Combined with high design life and maximum energy discharge throughput, using EVX series works well in a non-temperature-controlled application, such as outdoor security and surveillance.

"Our selection of CSB batteries for this application was a no-brainer due to their combination of price, quality, and delivery time," says M SAN Grupa. "The EVX series exceeded our expectations throughout its useful service life and we plan to replace these units with new EVX when the new replacement period comes around," M SAN Grupa also goes on to say. Combining the technical capability and service of our customer, M SAN Grupa, and our reliable VRLA-AGM batteries from CSB, the solution provided for the end-customer means power security 24-7.
