

Long Lasting Batteries Keeping Your Tennis Game Sharp

Company

POWERTRON

Location

Santa Ana, CA, USA

Product

GP1272F1

Installation Date

2003 - 2023

Application

General Purpose

Keeping your tennis skills sharp sometimes means employing tools for practice when you don't have a partner to play with. Tennis ball machines are commonly used in the sport to serve the ball at varying speeds with adjustments to keep your volley skills on-point. Tennis courts across the world use these machines daily, multiple times a day, both indoors and outdoors in varying temperatures. This means using a high-quality battery to keep the machine running.

Our customer Powertron Battery Co. had a customer of theirs replace the CSB batteries in their tennis ball machine after almost 20 years in operation! This customer would use the machine 3 times a week, feeding 200 balls through the machine and recharge the batteries. With temperatures in Southern California reaching over 35°C in the warm summer months, these batteries were used for almost 2 decades multiple times per week surviving less-than-ideal conditions for optimal battery operation. Our GP series is built with quality at the forefront to serve a wide array of applications in unknown conditions, providing that peace of mind knowing your device works as intended.

"Our customer called after almost 20 years and requested we replace the batteries with the same model used back in 2003, the CSB GP1272F1. Thankfully, we work with such reliable partners like CSB, that can provide us quality batteries to serve the community of Southern California, whatever their application calls for," said Powertron Battery Co. If you want your batteries to last as intended in their application and beyond, contact CSB and we will solve your power problems with quality and ease.
