

Asia Amusement - Reliable Power for Theme Parks

Company

Asia Amusement Machine

Location

Taipei, Taiwan

Product

EVH12390 / XTV12550

Installation Date

June 2022-August 2024

Application

Amusement Equipment Power
Backup

Asia Amusement Machine Co., Ltd., founded in 1987, has been a leader in the children's amusement equipment industry. Their products include battery-powered cars and rocking machines, designed to offer children safe and fun play experience. Due to the challenges posed by Taipei's hot outdoor environment, the company required a high-performance and reliable battery solution to ensure their equipment could run for extended periods without being affected by temperature fluctuations. CSB batteries, known for their durability, long lifespan, and stable performance in extreme temperatures, were selected as their primary solution.

The XTV series is specifically designed to handle extreme temperatures, effectively preventing issues such as battery swelling, and shortened lifespan caused by high heat. The XTV12550 battery excels in heat resistance, providing stable power even in harsh conditions. Additionally, the EVH12390 battery offers excellent high-rate discharge capabilities and a longer cycle life, significantly reducing the need for frequent battery replacements and thus lowering maintenance costs. These superior features made the EVH and XTV series a perfect match for Asia Amusement Machinery's high-efficiency battery needs.

Asia Amusement Machine says: "We've been extremely impressed with the outstanding performance of CSB batteries. Their ability to withstand high temperatures and deliver reliable, long-lasting power has been crucial for our operations. Additionally, their fast deliveries, flexible scheduling, and professional technical support have ensured that our amusement park runs smoothly without interruptions."
