JAN 2021

Application

KID GARAGE

Kid Garage, a well-established toy car rental business in the bustling Heron City-Paterna shopping center in Madrid, Spain, has served families for over a decade. Their business requires a reliable, high-performance battery solution to power their fleet of toy cars, which are constantly in use by children aged 4 to 6 years. The success of the business hinges on ensuring these vehicles are always operational, providing seamless and safe experiences for their young customers.

Faced with the challenge of finding a battery that could withstand the rigorous demands of daily operations while minimizing downtime, Kid Garage selected CSB's EVH12240 batteries. After evaluating multiple brands, they chose CSB batteries for their exceptional lifespan, low maintenance costs, and proven reliability. The EVH12240 model is specifically engineered for high-power output and sustained cycling performance, making it ideal for applications requiring a consistent and robust energy supply. By choosing CSB batteries, Kid Garage has mitigated risks, ensuring their vehicles remain in top condition.

Beyond enhancing operational efficiency, switching to CSB batteries has also positively impacted customer satisfaction. The consistent performance of the toy cars has led to fewer interruptions and complaints, allowing Kid Garage to focus on delivering an exceptional experience for families visiting the shopping center. The owner of Kid Garage said, *"In 10 years on toy car rental business I never found before a product with better performance than CSB / EVH12240, the best price / quality ratio on market, it's not worth paying less for a product that may put on risk your business."*
